# What is Dynamic ID?

You may have issued your staff with an ID card – which is great! It probably has their photo on it along with supplementary information that helps your clients to identify whether your staff member is genuine. But what happens when they leave your employment? Can you guarantee to get their ID card back? Or what if their role or key information changes? Do you really want to issue a new card? **And more importantly, can you guarantee your clients that the person standing in front of them is safe to work on their premises?**

The Dynamic ID System solves these problems by allowing you to store and maintain staff records on a secure database and issue coded ID cards that can be scanned using a smartphone or barcode scanner, providing your clients with instant confirmation of your staff's credentials.

- Updating staff records is quick and easy using a browser-based interface that can be securely accessed from anywhere using your own personal secure log in
- Dynamic ID stores the date, time and user ID of the person who edited the record, providing an essential audit trail and increased security
- Dynamic ID also logs the date, time and location of the scan so you'll always have a record of clients validating your staff member.
- The system is highly secure and all data is stored on our own managed servers (no anonymous cloud or third party systems are involved in the process)

# The process: as simple as 1, 2, 3

## Issue coded staff cards and inform your clients

Once you've issued your ID cards, you inform your clients about how to use them (we provide a web link and short instructional video which shows them how to use a QR or Barcode scanner on their mobile device to scan the QR code)

## Client scans ID card with phone or barcode reader

When your staff turn up on location a member of your client organisation scans the QR code on the ID to get confirmation of the holder's status with you. The entire process is very quick and takes less than a few seconds to complete.

## Phone/reader accesses database and scans data.

In the event of a former member of your staff trying to use the ID after they have left, the message the client sees on their phone or tablet will advise them of the action they need to take.
